

OLD HEALTH PROBLEMS AND SITUATIONS ADD TO COVID-19

Divanise Suruagy Correia¹

One of the biggest concerns on the health area is the 2019 coronavirus pandemic (Coronavirus Disease of 2019 – COVID-19) and its repercussion in people's life. At the beginning of 2020, the World Health Organization (WHO) signaled the outbreak of a new coronavirus in China, at march, the OMS declared a Public Health Emergency of International Concern (PHEIC) with the COVID-19. Since then, many studies have been developed and published about the disease, including the need for social isolation to avoid or minimize its exponential growth.

Despite we are living a crisis and emergency that reverberates in the social and economic areas and populational's health, the common health problems in every single region or country keep happening and deserving attention together with the current pandemic.

In this number, we are bringing works about nursery care into cardiac arrest and proper chemotherapy resources disposal. Related to this profession, we also publish the qualification theme, which is about nursing residency.

The extension is one of the university's columns, with research and teaching, being a space of knowledge production, accumulation, and dissemination. The extension action should offer the knowledge obtained through the research teaching articulating the scientific knowledge with the necessities of communities circumscribed to its insertion area. These actions should aim to search for integration and social transformation. Thus we share the work: "Playfulness and health assistance humanization", relating experiences of an extension project.

The WHO reports the world decrease of women's death by pregnancy and childbirth, however, we are far from the goals mainly observed in countries in development, flowing from the lack of routine care and emergency. Women who survived serious pregnancy, childbirth, and postnatal complications. It generated the "maternal near-miss" concept, a definition established by WHO as "a woman who almost died, but survived to the complications during pregnancy, childbirth or 42 days after the pregnancy end". Here we share the work: "Analysis on papers

¹Coordinator of the Alagoas Center of the Family Health Professional Masters.

about maternal near-miss through the Iramuteq software”, that contributes to the theme.

We invite everybody to appreciate one more number of our magazine, waiting that the works published may subsidize related studies, as well as a new horizon may come concerning COVID-19 pandemics.
